

Inventory Item Properties

I intend to make this program work as an inventory system for my church's tech gear (since I manage the multimedia equipment), so some of the fields would be more geared toward that.

- name: string
- size: string (can have standard units, so keep as string; eg: 1/4", 1/8")
- type: string (ie: connector type; eg: XLR, jack, coax, VGA, SDI, HDMI)
- length: float
- lengthUnit: string (keep unit separate since lengths would be more common)
- model: string
- brand: string
- inStorage: int (ie: count being held in storage or being used currently)
- totalCount: int (there likely isn't fractional parts of an item, so keep as an integer)
